

## Decide yourself, when and how to join...

TEGOPAC® is a new class of silane-modified polymers for sealant and adhesive formulations. It gives you flexibility, allowing you to adjust the most important properties of sealants and adhesives. Furthermore you benefit from entirely new ways of bonding materials individually, hence opening new areas of application in future.

For more information, visit us at [www.evonik.com/tegopac](http://www.evonik.com/tegopac).

# TEGOPAC®

## a new class of silane-modified polymers for sealant and adhesive formulations

- Helps adhesive and sealant formulators to expand into new fields of application
- With a unique adjustable flexibility in polymer design
- Broad range of properties due to different polarity and crystallinity
- Supported by our technical service for sealant and adhesive formulators

### Main technical benefits

- Easy to formulate
- High green strength
- High bonding strength
- Improved in-depth cure

### Applications

- Transport/Automotive,  
Assembly, Construction, DIY
